

Eliminate your “buddy punching” problems today!

PrintReader™ is an add-on biometric device that offers the convenience of “plug and play” hardware with the sophistication of biometric labor tracking.

Because PrintReader can be added to your current TimeClock 330/380 timekeeping solutions, eliminating the costly expense of buddy punching with your current system can be completed through a simple hardware add-on and programming upgrade of your existing TimeClock system.

Features and Capabilities

Employee Punch Recording — Identify vs. Verify

PrintReader offers the ability to record employee punches in two ways, “verify” and “identify.” The default method, “identification,” permits the system to recognize an employee and record their punch through a simple fingerprint scan. Alternatively, the “verification” method requires the employee to swipe a card or provide a PIN in addition to the fingerprint scan. The employee’s print will then be compared with the PIN or badge card used to record the punch.

Employee Print Registration

Registering employees on PrintReader can be completed within seconds. In fact, even your managers can be set up with their own terminal-specific manager profile. “Admin” features are then accessible via a simple print scan so that managers can avoid revealing their administrative password. Once employee prints are registered on any single terminal, the record is propagated to all other TimeClocks, enabling the employee to clock in and out from any active terminal or location.

Integration

Integration with TimeClock

Adding PrintReader to your existing time clock is quick and easy. Before attaching the reader to your TimeClock terminal, simply update the terminal software by “reprogramming” the clock. Then continue with the final steps of the provided instructions to complete the integration. (Note: Older versions of the TimeClock terminal may require a “firmware” chip upgrade.) Contact SwipeClock support for more information on firmware (support@swipeclock.com).

Connection

Connecting PrintReader

PrintReader connectivity to your TimeClock takes just seconds. The reader comes pre-configured and ready to connect to your unit through two simple cables. Alternatively, users of the TimeClock 380 only require a reader configured with one cable as this configuration is sufficient to provide power to the reader.

PrintReader Power Source

PrintReader power is derived directly from your TimeClock unit. As such, no additional cabling is required for operation, making PrintReader an ideal device for wall-mounting.

Partner Pricing

PrintReader Power Source

PrintReader involves the purchase of a single hardware unit and an additional monthly charge, which is applied in addition to SwipeClock's standard monthly pricing. The monthly services charge for PrintReader may then be adjusted, if applicable, based on the company's employee count.

PrintReader™ ...\$599.00
Monthly Service Charge

(The cheaper of the two calculations will apply)

Option A: \$9.00 per month per unit

[or] Option B: \$.63 per employee

Discounts on PrintReader— Partner Points

Through SwipeClock's Partner Point Program, Partners may earn up to 25% off all hardware at the Allied Level; Certified Level members receive 10% off all hardware; and both the Associated and Registered Partner Levels pay standard Partner Pricing. Take a moment to visit your *Partner Points Summary* page to find out what your Partner Level is, which can be found online in your SwipeClock Partner account.
